

# Monitoring HIV Pre-Exposure Prophylaxis Part 1

Jonathan V Iralu, MD, FACP  
Indian Health Service Chief Clinical Consultant  
for Infectious Diseases

## Monitoring the person on PrEP

- ❖ Pre-Exposure Prophylaxis for HIV requires quarterly follow-up
  - ❖ Schedule the patient for quarterly visits
  - ❖ Prescribing and Monitoring can be done by HIV Pharmacist Clinicians
  - ❖ Monitoring labs can be done in advance with self testing encouraged

# Monitoring the person on PrEP

## ❖ Monitoring Goals

- ❖ Evaluate adherence to PrEP
- ❖ Evaluate on-going risk and need for continued PrEP
- ❖ Evaluate for toxicity
- ❖ Ensure that the person has not acquired HIV
- ❖ Make sure there are no new Sexually Transmitted Infections (STIs)

# Monitoring the person on PrEP

## ❖ Quarterly History Review

### ❖ Adherence to PrEP

❖ “Everyone misses some doses. How many times a week do you?”

### ❖ Risk factors for HIV acquisition

❖ New Partners, condom use, site of sexual contact

❖ Alcohol and Drug use patterns

### ❖ Birth Control

### ❖ Symptoms of Acute HIV Infection

### ❖ Symptoms of Syphilis, Gonorrhea, Chlamydia, and other STIs

## Monitoring the person on PrEP-Labs

- ❖ Screen at each quarterly visit for the following
  - ❖ HIV Fourth Generation Test
  - ❖ RPR
  - ❖ Gonorrhea and Chlamydia (urine, pharynx, rectum) self testing
  - ❖ Pregnancy test for persons of childbearing potential
- ❖ Screen Creatinine Clearance annually if less than age 50 and eCrCl > 90 or twice a year if CrCl < 90 or age > 50,
  - ❖ BMP to calculate eCrCL (refill OK if  $\geq 60$  ml/min)

# Acute HIV Infection

## ❖ Background

- ❖ Acute febrile illness occurring 2-4 weeks after HIV exposure
- ❖ 40-90% of persons acquiring HIV experience this syndrome
- ❖ 80% of transmissions occur via mucosal surfaces
- ❖ 20% of transmissions are percutaneous or intravenous

# Acute HIV Infection

## Clinical Manifestations

# Acute HIV Infection Differential Diagnosis

- ❖ HIV
- ❖ Secondary Syphilis
- ❖ EBV
- ❖ RMSF
- ❖ Measles
- ❖ COVID-19
- ❖ Hantavirus
- ❖ Drug rash
- ❖ Lupus

# Acute HIV infection Clinical Presentation

## ❖ Symptoms

- ❖ Fever
- ❖ Fatigue
- ❖ Myalgia
- ❖ Rash
- ❖ Headache
- ❖ Pharyngitis
- ❖ Cervical adenopathy
- ❖ Arthralgia
- ❖ Night Sweats
- ❖ Diarrhea

# Acute HIV Infection: Diagnosis

❖ You have to think of it to make the diagnosis

❖ What to order:

❖ Fourth Generation HIV Antigen/Antibody test

❖ Screen for Ag and Ab

❖ Differentiation assay for HIV 1 vs HIV 2

❖ HIV viral load

❖ HIV Viral load

**Order Both!**

# Acute HIV Infection: Treatment

## ❖ Treat immediately!

- ❖ Improves symptoms especially if there is meningoencephalitis or neuropathy
- ❖ Makes the biomarkers look good
  - ❖ Stops CD4 cell depletion during the initial phase of infection
  - ❖ Enhances immune reconstitution
- ❖ Decreases risk of transmission
  - ❖ Risk of infection increased 2.5-fold for every 10-fold elevation in viral load

# Acute HIV Infection: Treatment

## ❖ When to treat

- ❖ Immediately
- ❖ Don't wait for resistance testing results

## ❖ What to treat with

- ❖ TAF/FTC/BIC
- ❖ TAF/FTC plus DTG

## ❖ How long to treat

- ❖ Forever!

Modify Rx  
when  
resistance  
test is back

# Diagnosing STIs

- ❖ Syphilis
- ❖ Gonorrhoea
- ❖ Chlamydia

# Syphilis

## Primary Chancre, Penile Shaft

**M** Mosby *STD Atlas, 1997*

# Primary Syphilis Findings

- ❖ Primary Syphilis (21 day incubation)
  - ❖ Chancre (heals 3-6 weeks)
  - ❖ Regional lymphadenopathy (starts 1 wk later)
  - ❖ RPR/VDRL positive in 78% (74-87% range)

# Rash of Secondary Syphilis Papular Form

---

**M** Mosby *STD Atlas, 1997*

# Secondary Syphilis

## Condyloma Lata

---

# Syphilis Clinical Stages

- ❖ Secondary Syphilis (2-8 weeks post chancre)
  - ❖ palmar/plantar rash
    - ❖ macular, papulosquamous, pustular syphilides
  - ❖ condylomata lata/mucous patches
  - ❖ alopecia (alopecia areata)
  - ❖ Pharyngitis, epitrochlear adenopathy, myalgia, weight loss, aseptic meningitis 1-2%, proteinuria, hepatitis, uveitis
  - ❖ RPR/VDRL positive in 100% of cases

# Latent Syphilis

**Latent syphilis = positive serology with  
no symptoms or signs**

❖ **Early Latent Syphilis:**

- ❖ Seroconversion within the last year
- ❖ primary or secondary lues within 1 year
- ❖ Contact of a primary, secondary or EL case

❖ **Late Latent Syphilis:** present > 1 year

❖ **Latent Syphilis of Unknown Duration:** No prior serology

# Neurosyphilis

## ❖ Meningovascular (infarction)

❖ Stroke syndromes (aphasia, hemiparesis, seizures)

## ❖ Parenchymal (neuron destruction)

❖ Tabes dorsalis (foot slap, wide based gait, lightning pains, (+) Romberg, Charcot Joints)

❖ General paresis (Personality, Affect, Reflexes, Eye, Sensorium, Intellect, Speech)

❖ Other: Gunbarrel sight (optic atrophy), uveitis, CN VII and VIII palsy, syphilitic otitis (deafness and tinnitus)

# Ocular Syphilis

# Tabes dorsalis

## Other Tertiary Syphilis Dx

### ❖ Cardiac Syphilis

- ❖ Aortitis-endarteritis obliterans of vasa vasorum
  - ❖ Saccular aortic aneurysm
- ❖ Secondary aortic insufficiency
- ❖ *Aortitis may develop more rapidly if HIV (+) but is rare since syphilis is usually diagnosed early in HIV*

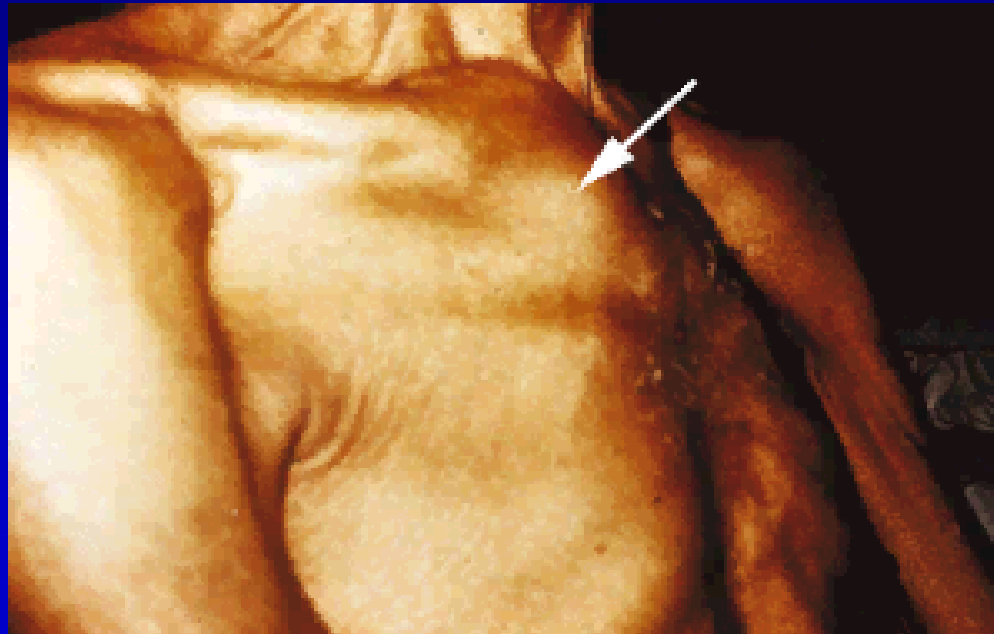

### ❖ Benign Gummatous Syphilis

- ❖ Develop in 10 years if HIV negative
- ❖ *Develop in months if HIV positive*

# Tertiary Syphilis Aortic Aneurysm

---

**M** Mosby *STD Atlas, 1997*

# Tertiary Syphilis

## Ulcerating Facial Gumma

**M** Mosby *STD Atlas, 1997*

# Syphilis Management

## ❖ Primary and secondary Syphilis

- ❖ Dark-field exam of skin lesions if available
- ❖ Draw RPR and HIV serology
- ❖ Administer Benzathine penicillin 2.4 mU IM x 1
  - ❖ Consider giving a second dose 1 week later if pregnant
- ❖ R/O optic/neurosyphilis if symptomatic
- ❖ Check RPR at 6 and 12 months-
  - ❖ **if < 4-fold drop at 12 months:**
    - ❖ Offer Lumbar Puncture **only if neurologic symptoms develop**
    - ❖ re-check HIV serology
    - ❖ re-treat with three weekly doses of Benzathine PCN if follow up cannot be ensured and consider LP

# Syphilis Management

## ❖ Latent Syphilis

- ❖ Check RPR (reflex MHA TP) and HIV test
- ❖ Careful genital exam
- ❖ LP if symptomatic, tertiary lesion, treatment failure
- ❖ Give Benzathine PCN 2.4 mU IM
  - ❖ once if early latent (give second dose in a week if pregnant)
  - ❖ weekly x3 if late latent or unknown duration.

# Syphilis Management

## ❖ Latent syphilis follow-up

❖ RPR at 6, 12 and 24 months

❖ if < 4-fold drop at 24 months:

❖ Close clinical and serologic follow up

❖ Offer Lumbar Puncture **if neurologic symptoms develop during f/u**

❖ re-check HIV serology

❖ if follow up cannot be ensured: re-treat  
three weekly doses of Benzathine PCN and  
consider LP

# Syphilis Management

## ❖ Neurosyphilis:

- ❖ PCN G 18-24 mU IV/day for 10-14 days
- ❖ Procaine 2.4 mU IM/day plus Probenecid 500 mg po QID for 10-24 days.
- ❖ Repeat LP if RPR titer does not drop or who have no clinical response to treatment

## ❖ Cardiac or Gummatous syphilis

- ❖ Benzathine PCN 2.4 mU IM q wk x 3

# Gonorrhoea

## ❖ Symptoms

- ❖ Genital discharge
- ❖ Rectal discharge or pain
- ❖ Sore throat
- ❖ Disseminated rash, often pustular with tenosynovitis/septic arthritis

## ❖ Diagnosis:

- ❖ Urine, Pharyngeal, Rectal Nucleic Acid Amplification Test (NAAT)

## ❖ Treatment

- ❖ **Ceftriaxone 500 mg IM monotherapy** for genital/rectal/pharyngeal
- ❖ Ceftriaxone IV daily for 7-14 days for disseminated/joint disease

# Chlamydia

## ❖ Symptoms

- ❖ Often none
- ❖ Genital discharge, less purulent than gonorrhea
- ❖ Pharyngitis
- ❖ Rectal pain/discharge

## ❖ Diagnosis

- ❖ Urine, Pharyngeal, Rectal Nucleic Acid Amplification Test (NAAT)

## ❖ Treatment

- ❖ Doxycycline 100 mg po bid for 7 days for Genital/Pharyngeal/Rectal
- ❖ Use Azithromycin 1 gm po x 1 if adherence is an issue or pregnant
- ❖ Doxycycline for 21 days for LGV

# Self testing for Gonorrhea and Chlamydia

**Self-Collection of Rectal Swab**  
ATTENTION: Read ALL instructions before you begin!

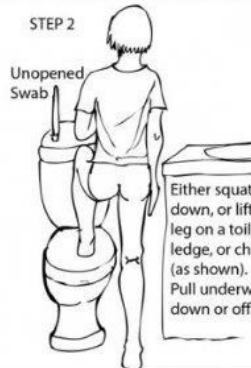

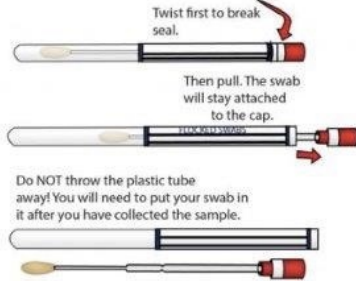

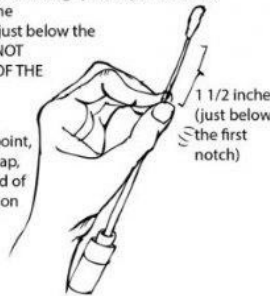

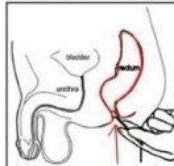

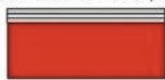

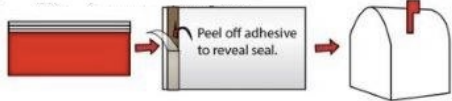

<p><b>STEP 1</b></p>  <p>Wash your hands thoroughly.</p>	<p><b>STEP 2</b></p>  <p>Unopened Swab</p> <p>Either squat down, or lift one leg on a toilet, ledge, or chair (as shown). Pull underwear down or off.</p>	<p><b>STEP 3</b></p> <p>Open the swab. DO NOT TOUCH THE TIP OF THE SWAB.</p>  <p>Twist first to break seal.</p> <p>Then pull. The swab will stay attached to the cap.</p> <p>Do NOT throw the plastic tube away! You will need to put your swab in it after you have collected the sample.</p>	<p><b>STEP 4</b></p> <p>With your dominant hand (right if you're right-handed, left if you're left-handed), grip the opened swab 1.5" away from the tip of the swab (just below the first notch). DO NOT TOUCH THE TIP OF THE SWAB.</p>  <p>1 1/2 inches (just below the first notch)</p> <p>Do NOT, at any point, use anything (soap, saliva, or any kind of lubricant) either on your body or on the swab.</p>
<p><b>STEP 5</b></p>  <p>With your other hand, position your bare buttock and lift one cheek for easy access to the rectum. (DO NOT use anything on your rectum or the swab.)</p> <p><b>Female Anatomy</b></p>  <p><b>Male Anatomy</b></p> 		 <p><b>STEP 6</b></p> <p>Insert the swab 1.5 inches into your rectum until you feel your fingers touch your anus.</p> <p><b>STEP 7</b></p> <p>Once the swab is in, walk your fingers halfway down the swab (away from your body) and grip it there, for stability. (The swab should stay where it is—only your fingers should move.)</p> <p><b>STEP 8</b></p> <p>Gently rub the swab in a circle, touching the walls of your rectum, to collect the specimen.</p> <p><b>STEP 9</b></p> <p>When removing the swab from your rectum, slowly turn it in a circle while pulling it out.</p>	<p><b>STEP 10</b></p> <p>Place used swab back into the transport tube. Close tightly to prevent leakage.</p>  <p><b>STEP 11</b></p> <p>Place closed tube into the red plastic zip-lock bag. Seal the bag.</p>  <p><b>STEP 12</b></p> <p>Place sealed zip-lock bag into the return mailer (white envelope with a blue diamond-shaped sticker on the front). Seal the envelope and drop it in any mailbox.</p>  <p>Peel off adhesive to reveal seal.</p>

Diagram designed by Garvi Sheth

## Summary

- ❖ Quarterly PrEP monitoring is easy
- ❖ Acute HIV is the “Don’t Miss” diagnosis for patients on PrEP
- ❖ Screening for asymptomatic STDs is critical in PrEP care
